DETAILED ACTION***Response to Arguments***

Applicant's arguments filed 1/30/06 have been fully considered.

Applicant's argument regarding the 112 rejection of claims 24, 33, 43 and 47 is persuasive. The 112 rejection of these claims is withdrawn.

Regarding the art rejection, applicant argued essentially that Bailey fails to teach the UART emulation. The argument is not persuasive. Even though Bailey does not specifically uses the term "UART emulation", Bailey teaches the functionality of a UART emulation as claimed.

Take claim 1 as an example, the claim recites "the driver comprises a UART emulation which *in response to an access targeted at a register set of a UART corresponding to the first communication port, converts the access as required for the register set and address assignment of the device.*" The claim language itself defines the functions of a UART emulation. Therefore, according to the claim language, a driver that can redirect an access request to a UART register set to the register set of the device would contain a UART emulation.

Bailey teaches a method for connecting a modem to the parallel port instead of the serial port as conventional modem.

Art Unit: 2153

Hence, Bailey modem is a non-standardized modem device. In order to make his modem compatible with existing software, Bailey teaches providing software emulation of the serial port so that communication to the serial port is redirected to the parallel port to his modem connected thereto. Hence, it appears to the operating system and application software that they are communicating to a conventional modem. See col.5 lines 28-32, 43-52.

It is well known in the art the essential component of a serial port is the UART. The UART is the component that converts data bytes from the computer to serial bits and vice versa. Communication in the computer to a serial port is essentially sending data the register set of the UART. Hence, emulating a serial port is a UART emulation. Bailey serial port emulator, in response to access to the serial port, redirects the access to his modem device. Hence, Bailey performs the "UART emulation" function as claimed.

Claims 46-49 are rejected under 35 USC 102(e) as stated in the prior office action.

Claims 1-2, 4, 6-9, 17-18, 23, 19, 21-22, 24-28, 30-32, 33, 35, 38-42, 43-45, 50-51 are rejected under 35 USC 103(a) as stated in the prior office action.

Art Unit: 2153

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
